

**Boom 9000
Incendiary Device**

User Manual

Thank you for your purchase of the Boom 9000 incendiary device. With proper care, your Boom 9000 will provide years of joy and excitement.*

The unique dual-explosion design of the Boom 9000 allows for initial bomb placement far away from the desired target, outside the security radius of most well-guarded targets.

**The Boom 9000 is a single-use device*

Setting up the Boom 9000

1. Place the explosive device in a location that allows the secondary explosive device to drop into a room with high water content.
2. Place the timer at least 5 feet above the explosive device.
3. Program the arm codes from your laptop or mobile device.
4. The initial explosion can be triggered at any time from your laptop or mobile device.
5. The secondary explosion will trigger automatically about 10 seconds after sufficient water absorption has occurred. This triggering process cannot be stopped once begun.
6. To enhance the secondary explosion, position near ancillary fuel source.
7. That's it! Once the arm code is sent to the device, multiple counterweights are triggered inside the device, making disarming a challenge for even the most experienced bomb specialists.

Disarming the Boom 9000

(Be sure to test the device before cutting the wires.)

1. Place the counterweight on the right side of the lever to keep it at the same angle once the wires from the timer are cut.

2. Cover the acid vat with the lid to prevent spills.

3. Position mirror between lightbulb and sensor, to reflect the light away from the sensor.

4. Attach red wire from red bomb terminal to right side ground.

Disarming the Boom 9000

(Be sure to test the device before cutting the wires.)

5. Wrap secondary explosive tightly to keep internal mechanism from moving

6. Wrap acid vat with tarp to prevent any spillage

7. Attach green wire from green bomb terminal to top ground

8. Use matched wire cutters to cut both wires from the timer within 200ms of each other.

Start your day off with a bang!
